Space™

USER-FRIENDLY AND ECO-EFFICIENT EXPANDED PRE-SCHOOL FOR THE CHILDREN OF HAMREGÅRD FÖRSKOLA BOLLNÄS

Assignment

Public authorities have on-going needs for temporary facilities, such as schools and kindergartens. The Hamregård pre-school in Bollnäs Municipality had the need to expand its facilities to have room for additional 50 children and needed them to be urgently available and readily usable including all furniture.

The public procurement has to follow certain mandatory procedures and the qualified suppliers have to meet the required criteria. In this case Bollnäs Municipality put out a tender and reviewed five different suppliers and alternative solutions.

Challenge

The temporary school facilities had to be ready to welcome the children in just six weeks and the new

facility should fit into the limited available space. And this including Christmas and New Year holiday period.

Solution

Bollnäs Municipality reviewed altogether five tenders before they decided to sign a three-year agreement with Ramirent and to implement Ramirent Temporary Space solution.

Ramirent designed, furnished, equipped and installed 12 temporary space modules and completed the whole project in less than 30 days. The new modules are connected to the existing school building and altogether provide 300m² extra space for 50 children and their six teachers. The modules are customised especially for small children and include such details as lower window ledges, smaller toilets, adjustable nursery tables and glass walls inside to accommodate their needs.

Success Factors

Bollnäs Municipality was very pleased with how Ramirent completed the project and fulfilled its commitments despite the very tight schedule. The reason for selecting Ramirent was also their ability to meet and go beyond all the basic safety and eco-efficiency requirements. In addition, Ramirent managed to assemble the modules into the limited space that was available.

”Customer was surprised of the high standard and so pleased with the results that they ordered 12 new modules with the same specifications.”, says Magnus Kjellin, Ramirent Business Development Manager.

Customer benefits

Ramirent Temporary Space solution not only met the requirements of the public procurement specifications but provided some unique benefits for Bollnäs Municipality and the pre-school children and the school staff:

- 01** Ramirent’s new generation modules are designed to offer convenience and to provide better conditions for both the children and the staff.
- 02** The premises are spacious and with special glass wall implementations so the staff can easily keep a good eye on the children.
- 03** With lower window ledges, small children can easily look out over the surrounding area.
- 04** Air-conditioning, heating and motion controlled lighting systems are both convenient and eco-efficient.
- 05** Ramirent solution is cost-efficient to mount and use.

”I got the feeling I could trust Ramirent already very early in the project. Ramirent acted in a professional and trustworthy way from the very beginning”, says Per-Erik Karlsson, Property Manager, Bollnäs municipality.

“NOW THAT THE PRE-SCHOOL HAS BEEN IN USE FOR SOME TIME, BOTH THE CHILDREN AND THEIR TEACHERS ARE REALLY PLEASED WITH THE RESULT”

Per-Erik Karlsson
Property Manager, Bollnäs municipality

Bollnäs municipality has a population of about 26 200 people, including 13 000 in the main town. Bollnäs municipality merged with Hanebo, Arbrå and Rengsjö municipalities and Bollnäs city in 1974. Over a quarter of the work force in Bollnäs is employed in health care. Other major employers are industries in different shapes, trade and communications.
