TEMPORARY FACILITIES FOR WATER DAMAGED MEDICAL CENTER IN ÖSTERVÅLA

Assignment

When Östervåla medical centre suffered from large water damage, planning of temporary facilities was initiated immediately. ByggConstruct AB was commissioned to provide temporary medical centre facilities that would meet all the demanded requirements. ByggConstruct AB trusted its long-term partner Ramirent to provide the solution.

Challenges

The challenge was to create a temporary solution that would accommodate all patient and treatment rooms, waiting rooms, office and laboratory in a single functioning unit. There were many counterparts in the project and good cooperation between them was understood to be necessary.

For Ramirent the main challenge was to deliver all the modules in just two weeks. Crucial for this project to be finished on schedule, was that the modules had to be on the site first to enable finalizing according to the specifications and then equipped and furnished. All of this was to happen in a tight time frame.

Solution

Ramirent provided a solution that included 37 temporary space modules. The customization of the modules included for example interior walls and doors, passages between the modules, electrical and ventilation systems, heating and fire alarm.

Success Factors

In order to provide a great quality solution with all the tailored features for the end customer, it is important that all the parties involved fully trust each other. Good project management in a complex situation was crucial in making the project a success. Ramirent reacted quickly, understood the specific requirements and delivered professionally.

“An established relationship with the constructor saved us valuable time. High quality project management and great cooperation with all the parties made everything possible”, says Ted Sagbrant, Project manager, Ramirent Sweden

Customer benefits

Now when the temporary medical centre has been in use, the staff working in the medical centre is positively surprised of how well everything works. The project enabled even improved functionalities as everything could be planned from scratch. The patients get good service and many of them don't even realize being in a temporary building.

The main benefits can be summarised as:

- 01** Fast implementation and efficient project management guaranteed the delivery on schedule.
- 02** Ramirent's solution is flexible and could be tailored for medical centre use in multiple ways.
- 03** Ramirent's solution meets all health and safety standards and legal requirements.
- 04** The functionality of the medical centre could be improved by utilizing the modularity of the elements.

“The functionality of the premises is better than before and makes our work easier every day”, says Eva Bolin, Operations Manager, Östervåla medical centre.

“EVERYBODY WAS POSITIVELY SURPRISED OF HOW EXCELLENT THE BUILDING BECAME”

Eva Bolin, Operations Manager, Östervåla medical centre.

Östervåla is located between Uppsala and Sandviken, just south of the Dalälven and has about 3000 inhabitants. Östervåla is known for its furniture manufacturing, entrepreneurship and active associations. Östervåla medical centre is one of the health centres in the county of Uppsala and offers broad expertise in primary health care.
